CHANNEL MULTIPLEXING & SCHEDULING
Maps logical to transport channels. HSDPA introduces fast MAC-hs scheduling in Node B rather than RNC, enabling sub-ms allocation decisions and adaptive modulation up to 64-QAM.

FLEXIBLE HARQ & SLOT SCHEDULING
Numerology-based slot duration (0.5 ms at μ=1 down to 0.0625 ms at μ=4 for mmWave). Mini-slot scheduling enables sub-slot URLLC grants. 16 HARQ processes. Beam management integrated.
