Register Number: 1924221223

Course Code: CSA0304

Course Name: MOBILE COMPUTING

Title

Construct a Concept Map that Evaluates the Effectiveness of Roaming Mechanisms in Mobile Communication

Aim: To construct a concept map that evaluates the effectiveness of roaming mechanisms in mobile communication by illustrating the relationships among the home network, visited network, authentication, registration, and billing, and assessing the importance of each process for successful roaming.

Relationship Explanation

- Home Network stores subscriber information.
- Visited Network provides service when the user travels.
- Authentication verifies the user's identity for security.
- Registration updates the user's current location.
- Billing records roaming charges between operators.
